

The Digital Toolbox is a tool that can aid you in your procurement and connects you with the best tech suppliers in the world. It is our aim to support you in the process of finding a solution to your problem, finding the right partners to help you solve that problem, and to set up the requirements to ensure adaptability of the solution in the longer term. The process will go in these steps:

- 1) Together we investigate the issue and how technology could help solve that problem.
- 2) We ask you to onboard the Digital Toolbox and go more in depth into the specifics of the solution that you are looking for.
- 3) Through a questionnaire in the Digital Toolbox we assess your needs and existing IT infrastructure to conclude on a potential Next Generation Solution.
- 4) Based on your needs, we will compile a list of products that can form a Next Generation Solution and could together solve your problem. This is summarised in the Purchase Plan that we hand over to you.
- 5) When you publish the tenders for the products comprising the Next Generation Solution that you want to procure, we will simultaneously engage our network in the tech market to find the best potential providers of these.
- 6) After the onboarding process of tech suppliers, you can choose one for each product from the list of available suppliers.
- 7) Having finalised the decisions we have a set of standardised contracts so that you can make quick agreements with the suppliers.
- 8) After the order, you will need to integrate the products. You could choose to do that yourself or with the help of an Integration Partner from our network.
- 9) You may choose to get additional help from use for Implementation of the solution.
- 10) Now you are good to go with your new digital Next Generation Solution!

Throughout the process, we will support you in making decisions and finding what you need. We have the technical, legal, and business expertise in our team to do so.

The screenshot shows the Digital Toolbox interface. At the top, there is a navigation bar with 'Menu', 'My Toolbox', the 'DIGITAL TOOLBOX' logo, and a user profile 'AJ A Jansen'. The main content area features a product card for 'Urban Air Mobility' with a description: 'Drones are light, safe, and multi-functional. They are capable of monitoring congestion, buildings, natural elements, incidents, and many more. Upgrade your city with flying allies.' Below the description are two buttons: 'Download Purchase Plan' and 'Finalize your order'. To the right of the text is an image of a drone flying over a city at night. Below the product card is a section titled 'Your shopping list' which contains a table with the following items:
